(54) CALL REGULATION SYSTEM FOR MOBILE COMMUNICATION SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To regulate the use of a mobile terminal as necessary at an optional place and for an optional time by receiving a regulating electromagnetic wave from a regulation setting means and stopping partly the function of the mobile terminal.

SOLUTION: A regulation setting means 3 transmits a regulating electromagnetic wave to a regulation area 5 included in a service area 4 that is controlled by a base station 1. A mobile terminal 2 has a receiving means which receives the regulating electromagnetic wave from the means 3 and also a function stop means which partly stops the function (one or both of receiving and transmitting functions) of the terminal 2 when the regulating electromagnetic wave is received. Then the function of the terminal 2 is partly stopped if the terminal 2 is kept in the area 5.
